

in4 LLC completes programming on second functional module of iGlue, an online software application based on semantic web technology.

BUDAPEST, HUNGARY 12/10/07 -- Power of the Dream Ventures (PDV), Hungary's premiere technology acquisition company, today announced that in4 LLC completed development work on Functional Module 2 of the Company's iGlue technology.

iGlue, is an online search engine, content organization and deliver, database builder, interactive encyclopedia and social network enabler based on semantic principles. The modules just completed includes a self-generative database and several key elements of the primarily user interface.

"Today iGlue took another important step toward commercial beta testing. The company's programmers completed the software's user interface, intelligence and a expanded its database to cover hundreds of thousands of entries. This data will serve as the foundation of the iGlue's dedicated encyclopedia upon which our search capabilities are built. We recently purchased an eighty eight processor Dell Blade system. Two of the blades, with a total of sixteen processors, are now dedicated to running custom software for indexing web sites and 'filling up' the iGlue semantic database", commented Viktor Rozsnyay, President of the Company.

"It is all coming together as planned. The just completed functional elements, together with the new compute power of the blades, will allow us to increase our database size by an order of magnitude, resulting in faster roll-out of iGlue. I believe once people have an opportunity to Beta test the product they will immediately recognize the immense functional expansion of the internet inherent in semantic technology", added Peter Vasko, Founder and CEO of in4 LLC.

iGlue promises to revolutionize internet use. A public beta of the product is planned for the second quarter of 2008.

Power of the Dream Ventures, Inc. acquired thirty percent of in4 LLC on August 1, 2007.
